Personnel Management

- Recruitment procedure
- Grievance handling mechanism
- Organizational communication
- Induction and training programmes

Personnel Management

- Project human resource management is the *process of managing company resources and individuals on a project team*.
- Project human resource management covers everything from hiring to training and organization to maximizing potential and tracking staff metrics.
- Project Human Resource Management *includes the processes that organize, manage, and lead the project team*.
- With a robust human resources management plan, we can organize, hire, motivate, and manage the workforce to ensure projects stay on track.

Human Resource Management Plan

- Creating a human resources management plan is initiated in the *early stages of a project*.
- It usually *involves identifying and documenting various roles, responsibilities, required skill sets, and reporting relationships*.
- Creating staffing management plans and assigning roles to multiple people or groups is also an essential part of this process.
- **Output:**
 - ✓ Identifying the training needs
 - ✓ Devising team-building strategies
 - ✓ Establishing rewards and recognition programs
 - ✓ Deciding measures for ensuring safety and compliance

Human Resource Management Plan - Steps

Step 1: Introduce the Plan

- A well-structured HR plan needs a clear introduction that outlines its purpose, components, and how the team will use it. It's like a roadmap that guides everyone.
- The introduction should be concise yet comprehensive to ensure all team members understand the plan's significance.

Step 2: Define the Roles & Assign Responsibilities

- Clarity is paramount in any project.
- To ensure each team member understands their role and responsibilities right from day one.
- And to achieve this, one needs to carefully assess the skills required for each project activity and create a structure that leverages each person's strengths.
- **Responsibility Assignment Matrix (RAM)** - visually represents each team member's roles and responsibilities for various project tasks.
- When it is created, the roles are defined, i.e., who is responsible for what, who is accountable for something, who needs to be consulted during the process, and who should be informed of the progress and outcomes.
- **RACI chart** is another tool that assigns specific roles to team members for each project task.

It uses acronyms to define these roles:

- **Responsible**: The person who performs the task.
- **Accountable**: The person ultimately responsible for the task's completion and success.
- **Consulted**: The person who provides input or advice on the task.
- **Informed**: The person who is updated on the task's progress and outcomes.

Human Resource Management Plan - Steps

Step 3: Write a Staffing Management Plan

- This phase ensures that the right people are in the right place at the right time.
- It involves planning and executing every aspect of staffing, from acquisition and training to performance reviews and rewards.

Step 4: Focus on Training & Development

- While skills training is essential, it's not the only focus.
- Equally important are onboarding new team members and cultivating a collaborative environment.
- This might involve project orientations, team-building activities, or training on necessary tools.

Step 5: Celebrate Achievements With Rewards & Recognition

- Project work often requires extra effort and dedication from team members.
- Recognizing and rewarding employees' accomplishments shows appreciation for their hard work and commitment.
- It also boosts morale, fosters a positive work environment, and encourages continued high performance.

Benefits of Project HR Management

1. Clear Role Definitions & Accountability

2. Improved Efficiency & Resource Allocation

3. Enhanced Collaboration & Communication

4. Better Risk Management

5. Improved Employee Engagement & Morale

Recruitment Procedure

- Recruitment can be considered the principal function of the Human resource department.
- It is a process that includes sourcing, screening, and shortlisting.
- It refers to the process of identifying the staffing need and then filling it.
- The whole process includes identifying, attracting, interviewing, selecting, and onboarding the right candidates for the organization.

A **recruitment process** involves activities like identifying different sources of labour supply from which applications of prospective employees may be obtained; evaluating the validity of different sources; choosing the most suitable source; and attracting and motivating prospective candidates to apply for the vacant jobs.

Recruitment Procedure

Step 1: Preparing

Once the job opening is approved internally, the recruiter contacts the hiring manager. This step is about **gathering details about the open position**. During the discussion, the recruiter has to gather information, like the required skills, roles, responsibilities, etc., and use this information to write a clear and inclusive Job description. Based on the job description, they can write the job posting.

Step 2: Sourcing

Once the job description is ready, the next step is to start the sourcing. It refers to **identifying and contacting qualified candidates rather than waiting for the candidate to apply for the position**. The primary goal is to pull qualified candidates. A recruiter uses a variety of job portals to pull the resumes, but it is not essential that for every position, sourcing is required. In some cases, if there are a large number of applications, there may not be any need to source more candidates.

Recruitment Procedure

Step 3: Screening

The Screening of a candidate can take place in many ways. Generally, the first step is **Resume screening**. If the resume meets the criteria required for the job opening, then the next step is the **phone screening**, in which, the recruiter can cover topics, like the candidate's availability, current role, and responsibilities, current salary, salary expectations, Notice period, etc., and if he seems to be the right candidate, an organization can process further with his profile.

Step 4: Selecting

This process is about sending the assignments, psychometric tests and scheduling interviews, participating in the interview process, and also keeping the hiring manager in the loop for the whole process. It is about **maintaining a good relationship with the candidate and keeping the candidate updated about the interview feedback**.

Step 5: Hiring

This step includes the **final discussion with the candidate about salary, joining date, etc.** Once the joining date is confirmed, the offer letter is released. In some cases, this step also includes background checks.

Step 6: Onboarding

Once the candidate has accepted the offer letter, the process is not over yet. This is where the **pre-boarding period** starts. This is the **time between the joining date and when the offer letter was accepted**. And it's very important to be in touch with your candidate during this period to keep them engaged. If not done so, it can result in them joining another company. It also includes sharing the new hire's email and other details with the team. **Once the candidate starts the first day, it's time to begin the onboarding process.**

Recruitment Techniques

- **Internal recruitment:** You can post the opening on your internal company site so that current employees can apply if they want to switch their roles. This technique can save a lot of time.
- **Retained recruitment:** You can reach third-party consultancies to fill the open positions, but you have to pay a fee for the recruitment work and even some additional pay once the position is closed by them.
- **Contingency recruitment:** In this option, you can reach third parties but have to pay only when the employee is hired.
- **Career fairs:** Going into this event provides an opportunity to hire the best candidate for your organization and also helps to market your company.
- **Campus Recruiting:** If you are looking for freshers and there is a good amount of vacancies in your organization, then going to campus and conducting the hiring drive can be a good option.
- **Social Media:** You can post the openings on LinkedIn, Facebook, and Twitter to attract more and more candidates.

Grievance Handling Mechanism

- It is a structured process for addressing and resolving complaints, concerns, or disputes that arise among stakeholders during the project lifecycle.
- It ensures transparency, accountability, and stakeholder satisfaction, ultimately contributing to the smooth execution of the project.
- **Purpose & Importance**
 - To address concerns raised by internal or external stakeholders (e.g., project team, contractors, communities).
 - To reduce project delays, reputational risks, and potential conflicts.
 - To ensure stakeholder engagement and maintain trust throughout the project.

Grievance Handling Mechanism – Principles

Accessibility – Easy access to file grievances

Transparency – Clear process for review and response

Timeliness – Prompt resolution and feedback

Fairness – Impartial and just decision-making

Confidentiality – Protection of identity where necessary

Sources of Grievances

Delay in payments or resource allocations

Health, safety, or environmental concerns

Lack of consultation or miscommunication

Poor working conditions or HR issues

Land acquisition, compensation disputes (for infrastructure projects)

Grievance Handling Process

Grievance Receipt

Grievances are submitted through forms, emails, helplines, or grievance boxes.

Acknowledgement

Confirmation sent to the complainant within a fixed timeframe (e.g., 2–5 days).

Registration & Logging

Entered into a grievance redressal register or system with a unique ID.

Review & Investigation

Team or grievance committee investigates the complaint with supporting evidence.

Resolution

Solution proposed within a defined timeframe (e.g., 15–30 days), after consultation with the complainant.

Feedback to Complainant

Final decision or action taken is communicated formally.

Appeal Process (if unresolved)

Option to escalate to higher authorities or independent bodies.

Monitoring & Reporting

Regular review of grievance trends and reporting to project leadership.

Best Practices

Set up a **Grievance Redressal Committee (GRC)** with clear roles

Define **Standard Operating Procedures (SOPs)** for grievance resolution

Conduct **training and awareness** programs for staff and stakeholders

Publish regular reports on grievance types and resolution status

Integrate the grievance mechanism into **project risk management plans**

Organizational Communication

- It refers to the **structured exchange of information** within and outside the project team, playing a vital role in ensuring that a project runs smoothly, efficiently, and transparently.

Various types of communication include:

Interactive communication	It is a two-way exchange of ideas, messages, and information between two or more people or machines.
Push communication	It is a one-way method of delivering information to a recipient without them needing to actively request it.
Pull communication	It is a method of communication in which the recipient actively seeks out information, such as through websites, newsletters, or other sources of information.
Face-to-face communication	It is an interpersonal exchange of information that takes place in person, allowing for a more comprehensive understanding since both parties can observe and interpret non-verbal cues such as body language and facial expressions.
Written communication	It is a method of exchanging information and ideas through written symbols, such as letters, emails, memos, and reports.
Synchronous communication	It is the exchange of information between two or more individuals in real-time.

Ensures alignment among team members, stakeholders, and management.

Facilitates coordination of tasks, deadlines, and resource allocation.

Reduces misunderstandings and conflict.

Improves decision-making with timely and accurate information.

Builds trust through transparent interactions.

Organizational Communication - Types

Internal Communication

Within the project team or organization
(Team meetings, memos, emails)

External Communication

With outside stakeholders
(Client updates, vendor coordination)

Vertical Communication

Between different levels of hierarchy
(Reports to managers, directives to staff)

Horizontal Communication

Among peers at the same level
(Inter-department collaboration)

Formal Communication

Official and documented channels
(Project charters, contracts, progress reports)

Informal Communication

Casual, unofficial interactions
(Chats, coffee discussions)

Key Components of Effective Communication in Projects

Clarity – Messages should be unambiguous.

Timeliness – Deliver information when it's needed.

Feedback Mechanism – Two-way communication for confirmation and improvement.

Medium Selection – Email, meetings, calls, dashboards – chosen appropriately.

Cultural Sensitivity – Especially important in multinational or diverse teams.

Induction and Training Programmes

- Induction and training programmes are vital components of Personnel Management, **aiming to integrate new employees smoothly into the organization** and to continually develop the skills and capabilities of the workforce.
- **Induction Programme (Onboarding)**
 - A structured process that introduces new employees to the organization, its culture, policies, procedures, and their specific roles.
- **Objectives:**
 - Help new employees feel welcomed and valued.
 - Familiarize them with organizational structure, rules, and expectations.
 - Speed up the learning curve and productivity.
 - Reduce anxiety and turnover.

Induction and Training Programmes

- **Training Programmes**

- A planned effort to facilitate learning of job-related knowledge, skills, and behaviors by employees.

- **Objectives:**

- Bridge the skills gap.
- Enhance performance and productivity.
- Support career growth and succession planning.
- Adapt to technological and process changes.

Types of Training

Orientation Training	For new hires
Technical Training	Job-specific skills
Soft Skills Training	Interpersonal & communication
Compliance Training	Legal and safety requirements
Managerial Training	Leadership development
Refresher Training	Updating existing skills
